

# Global Urban Indicators – Selected statistics

*Monitoring the Habitat Agenda and the Millennium Development Goals*

## **General disclaimer**

The designations employed and presentation of the data in the Statistical Annex do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

November 2009

**A. THE HABITAT AGENDA AND THE MILLENNIUM DEVELOPMENT GOALS INDICATORS**

- 1. Introduction.....
- 2. The data collection process .....
- 3. Year of reference.....
- 4. Sources and accuracy .....
- 5. Area of reference.....
- 6. List of indicators .....

**B. INDICATORS: DEFINITIONS, METHODOLOGY AND LIMITATIONS.....**

**C. TABLES**

*Table 1: City population of urban agglomerations with 750,000 inhabitants or more in 2007, by country, 1950-2025*  
.....

Table 2: Average annual rate of change of the Total Population by major area, Region and Country, 1950-2050 (%)

*Table 3: Average annual rate of change of urban agglomerations with 750,000 inhabitants or more in 2007, by country, 1950-2025* .....

*Table 4: Total Population at Mid-Year by Major Area, Region and Country, 1950-2050 (thousands)...*

*Table 5: Average Annual Rate of Change of the Percentage Urban by Major Area, Region and Country, 1950-2050 (per cent)* .....

*Table 6: Population of Rural and urban areas and percentage urban, 2007* .....

*Table 7: Urban population, proportion of urban population living in slum area and urban slum population at mid-year by major area, region and country.....*

*Table 8: Proportion of urban population living in slums 1990-2010.....*

*Table 9: Distribution of households by Shelter deprivation, country 2005.....*

*Table 10: Distribution of households by type of residence, country 2000-2005 .....*

*Table 11: Access to Drinking Water and Sanitation* .....

*Table 12: Access to services in Selected cities* .....

*Table 13: Under-Five mortality rate* .....

*Table 15: Solid waste disposal by shelter deprivation* .....

*Table 16: Percent distribution of type of cooking fuel by shelter deprivation* .....

*Table 17: Education; Literacy Rates by Shelter Deprivation*

*Table 18: Enrolment in primary education in urban and rural areas (female and male)*

*Table 19: Enrolment in primary education (female and male)(City)*

*Table 20: Percentage of female and male aged 15-24 years unemployed by shelter deprivation*

*Table 21: Percentage of female and male aged 15-24 years in informal employment by shelter deprivation*

*Table 22: Major Disaster Incidents, 1980-2000*

*Table 23: International Migrants and Internally Displaced Persons*

*Table 24: Transport Infrastructure*

*Table 25: Recorded Crime Data*

*Table 26: Gini Coefficients for Urban at National level, Selected Countries*

*Table 27: Gini Coefficients for Selected Cities and Provinces*

*Table 28: Percentage of children with Diarrhea*

*Table 29: Percentage of women who were attended to during delivery by skilled personnel*

*Table 30: Percentage of Malnourished children and Percentage of children immunised against Measles*

*Table 31: Percentage of children with diarrhea in last two weeks, ARI, fever in last 2 weeks*

*Table 32: Percentage of Malnourished and of Children immunised against measles*

## 1. Why MDG and Habitat Agenda urban indicators ?

The Millennium Development Goals (MDG) adopted by the UN member states in the year 2000 are broad goals for the entire world. They address essential dimensions of poverty and their effects on people's lives attacking pressing issues related to poverty reduction, health, gender equality, education and environmental sustainability. By accepting these goals, the international community has made a commitment to the world's poor, the most vulnerable, in precise terms, established in quantitative targets.

In order to assist Member States realize the eight goals of the Millennium Declaration, the United Nations System has set numerical targets for each goal. Further, it has selected appropriate indicators to monitor progress on the goals and attain corresponding targets. A list of 18 targets and more than 40 indicators corresponding to these goals ensure a common assessment and appreciation of the status of MDGs at global, national and local levels.

The United Nations System assigned UN-HABITAT the responsibility to assist Member States monitor and gradually attain the "Cities without Slum" Target, also known as "[Target 11](#)." One of the three targets of Goal 7 "Ensure Environmental Sustainability," [Target 11](#) is: "*By 2020, to have achieved a significant improvement in the lives of at least 100 millions slum dwellers*". However the revised version of the MDG monitoring framework, made effective January 2008, renumbered Target 11 as Target 7D.

The Slum Target is only a piece of the larger development framework. Improving the lives of slum dwellers will be achieved by considering the overall picture. The Slum Target deals more specifically with the issue of slums and the improvement of the lives of slum dwellers. However, in order to face the challenge of slum dwellers, one needs to consider the other facets of the problem through the other goals and targets. The conditions of slum dwellers will not improve worldwide if no action is taken in order to eradicate poverty and hunger (goal 1), to reduce child mortality (goal 4), combat HIV-AIDS (goal 6) and develop a partnership for development Official development assistance (goal 8).

That is why UN-HABITAT has adopted a more holistic approach by integrating the Habitat Agenda (HA) indicators in the overall MDG framework (Annex B. List of MDG and HA indicators). The Habitat Agenda indicators have been developed on the basis of the Habitat Agenda and on Resolutions 15/6 and 17/1 of the United Nations Commission on Human Settlements. They comprise of 19 indicators which measure performances and trends in selected key areas of the Habitat Agenda ([the list of indicators is provided on page 7](#)). Together, they should provide a quantitative, comparative base for the condition of cities, and show progress towards achieving the Habitat Agenda.

## 2. Towards a Global Urban Indicators Database III

UN-HABITAT has been a pioneer organization in the collection of urban indicators. In 1991, it initiated the Housing Indicators Programme, focusing on monitoring shelter performances. It then became Urban Indicators Programme in 1993 in order to focus on a larger range of urban issues. The programme produced two main databases in 1996 and 2001 (Global Urban Indicators Databases I and II), presented at the Habitat II Conference and the Istanbul +5 which helped establishing regional trends in key urban issues. In the Habitat Agenda (result of the 1996 Habitat II Conference, Member States and the Habitat Agenda Partners have requested that UN-HABITAT continue monitoring urban conditions worldwide. They have also committed themselves to monitor their own urban conditions overtime and report on their trends regularly. The Global Urban Indicators Database produced in 2003 and updated annually addresses the Habitat Agenda key issues, with a specific focus on the [Millennium Development Goals](#), particularly, its Target 7D on the improvement of slum dwellers.

For this new phase, data will be collected through different mechanisms. For the Africa Region, workshops will be held in order to gather experts to agree on key results for the region using a sample of urban agglomerations. Data experts will be selected from National Statistics Offices, Ministries responsible for urban issues at the National level, Municipal and Metropolitan authorities representing urban agglomerations.

## 3. The data collection process

It is expected that data collection and analysis be a collaborative effort between National Statistics Offices, Ministries responsible for urban issues, City and Metropolitan authorities and the Research community. Some results can be completed solely by reference to secondary materials. Others will require consultation with small group of experts. Also, it is vital to get knowledgeable experts to interpret the data and provide their most informed judgment on the values of the indicators.

The experience with the indicators programme to date has demonstrated that in order to obtain good data:

- highly qualified experts and officials in each country need to be consulted for the collection and estimation of the indicators; small groups of experts should be gathered in the different specialised areas (tenure, shelter, environment, governance, etc)
- these experts should be in direct communication with UN-HABITAT when necessary, and work should be reviewed and commented on at different stages.

#### 4. 4. Sources and accuracy

The suggestions given vary between using “hard” data, i.e. published data which is desirable but not readily available for all indicators, and using “soft” data, i.e. indirect evidence or the informed opinion of experts. The preferred option should always be to use published data (adjusted for year, definition, etc.) whenever it is available and recent enough. For all data collected, the guiding principles are that it should be the best available, the latest available, and that it should be fully documented. When possible, it is better to provide the original tables and data sources used for the calculation and estimates.

#### 5. 5. Area of reference

For city level data, the standard area of reference is the urban agglomeration.

When data for the Urban Agglomeration is not available, data for the Metropolitan Area might be used.

This should be indicated in a note page attached to the results. However, using the city proper as an area of reference is not suitable as it does not represent the total built-up area of the city.

##### 5.1 Definitions

*The **urban agglomeration** is defined as the built-up or densely populated area containing the city proper; suburbs, and continuously settled commuter areas. This may be smaller or larger than the metropolitan area. Other similar UN definition: Comprises a city or town proper and the suburban fringe or thickly settled territory lying outside, but adjacent to, its boundaries. A single large urban agglomeration may comprise several cities or towns and their suburban fringes<sup>1</sup>*

*The **metropolitan area** is the set of formal local government areas which are normally taken to comprise the urban area as a whole and its primary commuter areas.*

*The **city proper** is the single political jurisdiction which contains the historical city centre.*

---

<sup>1</sup> United Nations. 1998. Principles and Recommendations for Population and Housing Censuses.

## 5.2 Reasons for using the urban agglomeration

Countries have different definitions of cities and we need to have comparable areas of reference to be able to make international comparisons;

Our interest is to analyse cities as a whole that is the built-up area comprising the city center and the suburbs forming a continuous settlement that may be called the city (we called it the urban agglomeration);

In many cases (typical: Paris - region Ile de France), the metropolitan area is larger than the built-up settlement and comprise rural parts with very low density settlements that cannot be qualified as part of an urban settlement;

In some cases (typical: Australian cities), the metropolitan area is smaller than the actual urban agglomeration. It has been defined administratively very long time ago and since that time, the urban settlement has spread beyond the metropolitan border.

## 5.3 Challenges

The urban agglomeration, although defined by UNSD for reporting on cities (*World Urbanisation Prospect*: reports on total population and growth rate of urban agglomerations of 750 k and more), is not often used by cities for urban aggregates;

Cities rely mostly on data at different levels which vary according to each country's geographical administrative divisions: municipalities (ex: municipal budget data, birth, death records, etc), districts (police records, etc), metropolitan areas (transport data), enumeration areas (Census) and others linked to administrative divisions. The challenge is to aggregate data from the different types of areas.

Municipalities and enumeration areas are used by all countries. Their size vary though (Madras has more than 20 municipalities, some cities have only 2 or 3);

For the data collectors, most important is the task consisting in deciding on what will be the most convenient and reliable area for the urban agglomeration in order to be able to assemble the requested indicators.

## 5.4 How to define the urban agglomeration's boundaries

### 5.4.1 Obtain the following maps:

- map of the different administrative boundaries (municipalities, districts, agglomeration, etc.) ;
- map of the Census divisions (enumeration areas or higher level subdivisions);
- maps, aerial photographs or satellite images representing the built-up area;
- other technical maps in use for the city.

### 5.4.2 Identify the urban agglomeration area

Identify with a group of urban experts what is meant to be the urban agglomeration area. Criteria may include the following:

Minimum density to be considered for *built-up or densely populated area*;

Minimum size of the urban land and distance between urban lands to be considered as part of the same continuous settlement. A rule recommended by the United Nations and used by a number of members states is that areas of urban land of 20 or more hectares that are less than 200 metres apart are linked to form a continuous urban area;

Minimum functional relations of the urban land to the city. Some free-standing settlements may be lying outside the urban area together with tracts of surrounding rural land. However, they may functionally depend of the urban areas in terms of employment and services. Also, they may be well connected by good road and transportation system to the main urban area because of that functional relation.

### 5.4.3 Select the enumeration areas

Select the enumeration areas or higher level subdivisions used for the Census which, together, form the urban agglomeration area (UAA). This selection will be used to aggregate all selected data for the UAA.

# List of Habitat Agenda Indicators

Chapter/ Goals	Indicators
<b>1. Shelter</b>	
<b>Goal 1:</b> Promote the right to adequate housing	<b>Indicator 1.1: durable structures</b> <b>Indicator 1.2: overcrowding</b> <b>Indicator 1.3: housing price and rent-to-income</b> <i>Indicator 1.4<sup>2</sup>: right to adequate housing</i>
<b>Goal 2:</b> Provide security of tenure	<b>Indicator 1.5: secure tenure</b> <b>Indicator 1.6: authorized housing</b> <b>Indicator 1.7: evictions</b>
<b>Goal 3:</b> Provide equal access to credit	<i>Indicator 1.8<sup>2</sup>: housing finance</i>
<b>Goal 4:</b> Provide equal access to land	<b>Indicator 1.9: land price-to-income</b>
<b>Goal 5:</b> Promote access to basic services	<b>Indicator 1.10: access to safe water</b> <b>Indicator 1.11: access to improved sanitation</b> <b>Indicator 1.12: connection to services</b>
<b>2. Social development and eradication of poverty</b>	
<b>Goal 6:</b> Provide equal opportunities for a safe and healthy life	<b>Indicator 2.1: under-five mortality</b> <b>Indicator 2.2: homicides</b> <b>Indicator 2.4: HIV prevalence</b> <i>Indicator 2.3<sup>2</sup>: urban violence</i>
<b>Goal 7:</b> Promote social integration and support disadvantaged groups	<b>Indicator 2.5: poor households</b>
<b>Goal 8:</b> Promote gender equality in human settlements development	<b>Indicator 2.6: literacy rates</b> <b>Indicator 2.7: school enrolment</b> <b>Indicator 2.8: women councilors</b> <i>Indicator 2.9<sup>2</sup>: gender inclusion</i>
<b>3. Environmental Management</b>	
<b>Goal 9:</b> Promote geographically-balanced settlement structures	<b>Indicator 3.1: urban population growth</b> <b>Indicator 3.2: planned settlements</b>
<b>Goal 10:</b> Manage supply and demand for water in an effective manner	<b>Indicator 3.3: price of water</b> <b>Indicator 3.4: water consumption</b>
<b>Goal 11:</b> Reduce urban pollution	<b>Indicator 3.5: wastewater treated</b> <b>Indicator 3.6: solid waste disposal</b> <b>Indicator 3.7: regular solid waste collection</b>
<b>Goal 12:</b> Prevent disasters and rebuild settlements	<b>Indicator 3.8: houses in hazardous locations</b> <i>Indicator 3.9<sup>2</sup>: disaster prevention and mitigation instruments</i>
<b>Goal 13:</b> Promote effective and environmentally sound transportation systems	<b>Indicator 3.10: travel time</b> <b>Indicator 3.11: transport modes</b>

<sup>2</sup> This indicator gives an assessment of areas which cannot be easily measured quantitatively. They are audit questions generally consisting of checkboxes for yes or no answers.

---

**Goal 14:** Support mechanisms to prepare and implement local environmental plans and local Agenda 21 initiatives

**Indicator 3.12<sup>2</sup>: local environmental plans**

---

## 4. Economic Development

---

**Goal 15:** Strengthen small and micro-enterprises, particularly those developed by women

**Indicator 4.1: informal employment**

---

**Goal 16:** Encourage public-private sector partnership and stimulate productive employment opportunities

**Indicator 4.2: city product**  
**Indicator 4.3: unemployment**

---

## 5. Governance

---

**Goal 17:** Promote decentralisation and strengthen local authorities

**Indicator 5.1: local government revenue**  
**Indicator 5.2<sup>2</sup>: decentralization**

---

**Goal 18:** Encourage and support participation and civic engagement

**Indicator 5.3: voters participation**  
**Indicator 5.4: civic associations**  
**Indicator 5.5<sup>2</sup>: citizens participation**

---

**Goal 19:** Ensure transparent, accountable and efficient governance of towns, cities and metropolitan areas

---

## MDG Goal 7, Target 7D

---

**Goal 7:** Ensure environmental sustainability

**Indicator 7.10: Proportion of urban population living in slums**

---

**Table 1: City population of urban agglomerations with 750,000 inhabitants or more in 2007, by country, 1950-2025**

[sq]Source: UNHCR, 2006, United Nations, 2006.

**Notes**

- 1 According to the Government of Algeria, there are an estimated 165,000 Sahrawi refugees in Tindouf camps.
- 2 2004 data for Costa Rica (asylum-seekers) and the Libyan Arab Jamahiriya (refugees and asylum-seekers).
- 3 UNHCR figures for Pakistan only include Afghans living in camps who are assisted by UNHCR. According to the 2005 government census of Afghans in Pakistan and subsequent voluntary repatriation during the year, there are an additional 1.5 million Afghans
- 4 With the introduction of the new Immigration Act in 2005, the Central Aliens Register now encompasses new residence categories and simultaneously refines previous ones, allowing for a better differentiation of refugee statistics. The refugee data included in this table refers to 15 December 2005.
- 5 UNHCR's method of estimating the refugee population in the United States is currently under review due to newly available information. As a result, the estimated refugee population in the country might increase significantly as of 2006.
